📄 SUMMARY

Full stack developer with hands-on experience building production ready web applications using React, Node.js, Next.js and PostgreSQL. Comfortable across the stack from responsive UI to REST APIs and database design. Proficient with AI-assisted development workflows (Claude Code, GitHub Copilot) to ship features faster.

🧠 SKILLS

Frontend

React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS

Database

PostgreSQL, MongoDB, MySQL

Languages

JavaScript, TypeScript, Python, C/C++, C#

Backend

Node.js, Express.js, Next.js, REST APIs, PHP

Tools

Git/Github, Linux, Docker, Postmn, PM2, Nginx, Ngrok, Prometheus, Node Exporter, Grafana, NetData, Node Exporter

📁 PROJECTS

Khadok Food Ordering Web App

2026

Tech Stack: Node.js, Express.js, MongoDB, React, Vite, TailwindCSS, Firebase, Stripe

-- Github [🔗](#) Live-Demo [🔗](#)

- Built a full-stack food ordering platform with JWT-based auth and Google Sign-In (Firebase Admin SDK), cart management and an admin panel for menu and order status control.
- Integrated Stripe Checkout with webhook-based payment confirmation and deployed frontend and backend together on Vercel as a single serverless project.

CI/CD Pipeline Using Github Action with Self-Hosted Runner

2026

-- Github [🔗](#)

- Built a CI/CD pipeline using GitHub Actions with separate test and deploy jobs, uploading test results as artifacts
- Configured a self-hosted runner on a local machine to handle deployments via a custom deployment.sh script
- Resolved a platform-specific Nginx incompatibility on Apple Silicon by decoupling it from the pipeline and managing the Node.js process with PM2 instead

Deploy a Web Application in AWS Private Subnet Using Reverse Proxy Architecture

2026

-- Github [🔗](#)

- Built a two-tier AWS network architecture with a custom VPC, configuring public and private subnets, an Internet Gateway, NAT Gateway, and separate route tables to isolate backend resources from direct internet exposure
- Deployed Nginx on a public EC2 instance as a reverse proxy to forward traffic to a Node.js application running in a private subnet with no public IP

Space Blasters 2099: PyGame Action Game, Tech Stack: Python, Pygame-CE, OOP

2026

-- Github [🔗](#)

- Built a 2D space shooter in Python and PyGame using OOP for entity management, collision physics, and a multi-state game engine (Play, Pause, Restart, Home) with optimized asset loading.
- Established a reproducible dev workflow with virtual environments (venv) and requirements.txt, enabling one-command cross-platform setup.

🎓 EDUCATION

BSc in Computer Science & Engineering

2022 – 2026 | Dhaka, Bangladesh

American International University-Bangladesh [🔗](#)

CGPA: 3.64 out of 4
